## PROFILE

AI and Automation specialist with expertise in RPA development, machine learning, and process optimization. With 1.5+ years of hands-on experience developing RPA solutions, ML pipelines, and process automation systems. Proven track record of reducing processing time by 15–40% through intelligent workflow design. Skilled in Python, UiPath, and MLOps, with expertise in translating business requirements into scalable technical solutions processing 50,000+ daily records.

## EXPERIENCE

### Istidama Consulting

*Python and Applied AI TA*

February 2026 – Present

Amman, Jordan

- Supported 50+ learners in achieving program milestones across a 24-week Applied NLP & Knowledge Systems curriculum (AI.SPIRE) by delivering hands-on technical reinforcement and structured code reviews.
- Accelerated learner skill development in Python, NLP, RAG, and knowledge graphs by providing first-pass grading and actionable assignment feedback at scale.
- Reduced at-risk learner dropout by proactively monitoring progress and escalating cases, while reinforcing professional engineering practices including version control, documentation, and reproducibility.

### Fiverr

*Freelancer – ML & Automation Solutions*

March 2025 – Present

Amman, Jordan

- Maintained a 4.9/5.0 average client satisfaction rating across 8+ projects by delivering tailored machine learning and automation solutions for businesses, content creators, and hobbyists.
- Reduced manual processing time by 40–60% for clients by designing custom automation workflows that streamlined business operations.
- Achieved 95%+ data extraction accuracy on 10,000+ daily data points by building robust web scraping pipelines.

### Takarub TEL

*Artificial Intelligence Developer Intern*

July 2024 – September 2024

Amman, Jordan

- Reduced data processing time by 15% across team workflows by optimizing SQL queries in collaboration with a 4-member engineering team.
- Improved production data quality by 98% by implementing data validation pipelines for AI project environments.
- Cut onboarding time by 30% and improved cross-team collaboration by designing and documenting 12+ automation processes for AI projects.

## EDUCATION

### Bachelor of Artificial Intelligence and Robotics

Al-Balqa' Applied University

September 2019 – May 2025

As-Salt, Jordan

### Advanced Data Analytics Training Program

Correlation One

October 2024 – March 2025

Remote

## CERTIFICATES

### UiPath RPA Developer Foundation

Coursera, UiPath

### Machine Learning

Coursera, Stanford University

## SKILLS

- RPA & Automation:** UiPath (Certified), Process Mining, Workflow Optimization, Bot Framework, Selenium
- Programming:** Python, SQL, C++, HTML, CSS

- **MLOps & DevOps:** Docker, Git, CI/CD, Flask, FastAPI, REST APIs, Model Deployment
- **AI and ML:** TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Neural Networks, Supervised/Unsupervised Learning
- **Data Tools:** Excel (Advanced: Macros, VBA, Power Query), SQL Server, PostgreSQL, JSON, Web Scraping

## PROJECTS

---

### Chatty – Real-Time Web Messaging Application

- Enabled instant, secure messaging for users by building a full-stack Django application with WebSocket support via Django Channels and AES-256 end-to-end message encryption.
- Reduced deployment complexity by containerizing the application with Docker and deploying to Fly.io, supporting group chats, file sharing, magic link login, and theme customization.
- Improved backend reliability and scalability by integrating Redis as a WebSocket channel layer and PostgreSQL for persistent storage, with a clean modular project architecture.

### MLOps Application for Fruit Image Classification

- Achieved 92% image classification accuracy on 5,000+ images by developing an end-to-end automated ML pipeline from training to inference.
- Reduced deployment time by 70% and ensured environment consistency by containerizing the application with Docker.
- Served 100+ requests/hour with under 200ms average response time by deploying a Flask RESTful API.

### Multi-Agent AI Workflow System

- Enabled complex task delegation across 4 specialized AI agents by building a collaborative agentic system with a RESTful API and integrated tool registry.
- Improved system security and correctness by developing a Python code execution sandbox with a validation framework supporting 3 comparison modes and comprehensive error handling.
- Extended agent capabilities by integrating web search, file operations, and mathematical tools, achieving under 200ms response time across 100+ API requests.

### Smart Lock Embedded System with ML Authentication

- Achieved 95% facial recognition accuracy and under 2-second unlock response time by engineering an IoT system with an optimized ML model running on embedded hardware.
- Ensured 99.9% system availability by developing fallback automation workflows with real-time sensor data processing.

### Multi-Platform Job Scraping & Automation System

- Aggregated 1,000+ daily job postings from Indeed, LinkedIn, and Akhtaboot with 90%+ scrape success by implementing advanced bot detection circumvention and CAPTCHA handling.
- Managed 50,000+ job records at 98% duplicate removal accuracy by designing a multi-agent workflow with automated data cleaning and a PostgreSQL backend exposed via Flask API.

## LANGUAGES

---

- Arabic: Fluent in writing, reading and speaking
- English: Fluent in writing, reading and speaking
