PROFILE

AI Engineer with 1.5+ years of hands-on experience building LLM-powered applications, Retrieval-Augmented Generation (RAG) pipelines, and multi-agent orchestration systems, backed by a strong foundation in secure data management, data validation/governance, MLOps, and containerized deployment (Docker). Experienced in designing production data pipelines that maintain 95–98%+ accuracy while processing 50,000+ daily records, with particular attention to data quality, deduplication, and reliability. Currently expanding into cloud infrastructure with hands-on AWS training to strengthen deployment and scalability skills for production AI systems. Open-source contributor to a PyTorch model-compilation library, skilled in Python, PyTorch, TensorFlow, Docker, and FastAPI, with a track record of translating business and operational requirements into scalable, production-ready, and compliant AI/data solutions.

EXPERIENCE

Python and Applied AI Teaching Assistant — *Istidama Consulting* February 2026 – Present

Instructing team member for AI.SPIRE — a 24-week Applied NLP & Knowledge Systems curriculum covering LLMs, RAG pipelines, and knowledge graphs

- Supported 50+ learners in achieving program milestones across the AI.SPIRE curriculum by delivering hands-on technical reinforcement and structured code reviews as part of the program's instructing team.
- Accelerated learner skill development in Python, NLP, RAG, and knowledge graphs by providing first-pass grading and actionable assignment feedback at scale.
- Reduced at-risk learner dropout by proactively monitoring progress and escalating cases, while reinforcing professional engineering practices including version control, documentation, and reproducibility.

Freelance ML & Automation Consultant — *Independent / Self-Employed* March 2025 – Present

- Maintained a 4.9/5.0 average client satisfaction rating across 8+ projects by delivering tailored machine learning, automation, and API integration solutions for businesses, content creators, and hobbyists.
- Reduced manual processing time by 40–60% for clients by designing custom automation workflows that streamlined business operations.
- Achieved 95%+ data extraction accuracy on 10,000+ daily data points by building robust, reliable web scraping and data pipelines.

Artificial Intelligence Developer Intern — *Takarub TEL* July 2024 – September 2024

- Improved production data quality by 98% by implementing data validation pipelines for AI project environments — establishing the accuracy and integrity standards required for sensitive operational data.
- Reduced data processing time by 15% across team workflows by optimizing SQL queries in collaboration with a 4-member engineering team.
- Cut onboarding time by 30% and improved cross-team collaboration by designing and documenting 12+ automation processes for AI projects.

EDUCATION

Bachelor of Artificial Intelligence and Robotics — *Al-Balqa' Applied University* September 2019 – May 2025

Advanced Data Analytics Training Program — *Correlation One* October 2024 – March 2025

CERTIFICATES

- UiPath RPA Developer Foundation — Coursera, UiPath
- Machine Learning — Coursera, Stanford University
- AWS Cloud Practitioner — In Progress

SKILLS

AI & ML: LLMs, Retrieval-Augmented Generation (RAG), Multi-Agent / Agentic Systems, Hugging Face Transformers, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Neural Networks, Supervised/Unsupervised Learning

Cloud & Infrastructure: AWS (in progress — EC2, S3, Lambda), Docker, Docker Compose, Model Deployment, CI/CD

Data Governance & Quality: Data Validation Pipelines, Deduplication, Data Cleaning, Secure Data Management, Excel (Advanced: Macros, VBA, Power Query), SQL Server, PostgreSQL, JSON

MLOps & DevOps: Git, CI/CD, Flask, FastAPI, REST APIs, Model Deployment

Programming: Python, SQL, C++, HTML, CSS

RPA & Automation: UiPath (Certified), Process Mining, Workflow Optimization, Bot Framework, Selenium, Web Scraping

PROJECTS

Multi-Agent AI Workflow System

- Enabled complex task delegation across 4 specialized AI agents by building a collaborative agentic system with a RESTful API, function/tool-calling, and an integrated tool registry.
- Improved system security and correctness by developing a Python code execution sandbox with a validation framework supporting 3 comparison modes and comprehensive error handling.
- Extended agent capabilities by integrating web search, file operations, and mathematical tools, achieving under 200ms response time across 100+ API requests.

mlnode – Open-Source JSON-to-PyTorch Model Compiler (github.com/Nasser-Obeid/mlnode)

- Designed and published an open-source Python library that parses JSON-described neural network graphs and compiles them into executable PyTorch nn.Module architectures, removing manual model-wiring code.
- Implemented a three-stage Parser → Validator → Executor pipeline with static shape validation that catches architecture errors before a single tensor is allocated, across 50+ supported layer types.
- Ensured production-grade reliability with a 128-test Pytest suite (~88% coverage), a versioned JSON schema, and PyPI packaging for public distribution.

Multi-Platform Job Scraping & Automation System

- Managed 50,000+ records at 98% duplicate removal accuracy by designing a multi-agent workflow with automated data cleaning and a PostgreSQL backend exposed via a Flask API.
- Aggregated 1,000+ daily records from multiple sources with 90%+ scrape success by implementing robust, resilient data-collection safeguards.

MLOps Application for Fruit Image Classification

- Achieved 92% image classification accuracy on 5,000+ images by developing an end-to-end automated ML pipeline from training to inference, containerized with Docker and served via a Flask REST API (100+ requests/hour, <200ms response).
